

Save Philly Festivals Client Handover Guide

Purpose: operational handover and launch-readiness reference

Delivery scope: application, workflows, controls, and production gates

[Platform Handover](#)[Operational Safety](#)[Activation Controls](#)[Runbooks](#)

<h2>1) System Snapshot</h2>

```
<div class="stack">
```

```
  <article class="box">
```

```
    <h3>Application</h3>
```

```
    <p>Next.js web platform for public festival discovery,  
producer submissions, and editorial administration with  
role-based controls.</p>
```

```
  </article>
```

```
  <article class="box">
```

```
    <h3>Automation</h3>
```

```
    <p>Dedicated N8N runtime and contract-tested workflows,  
intentionally isolated and controlled from core web release  
paths.</p>
```

```
  </article>
```

```
</div>
```

```
<div class="callout">
```

```
  Release of application code does not automatically  
activate outbound providers. External integrations require  
explicit authorization and checklist completion.
```

```
</div>
```

<h2>2) Delivery Boundaries</h2>

```
<table>
```

```
  <thead>
```

```

    <tr><th>Area</th><th>Delivered now</th><th>Not active by
default</th></tr>
  </thead>
  <tbody>
    <tr><td>Public festival experience</td><td>Search,
detail pages, schedule builder, email/export flows</td>
<td>None in core discovery path</td></tr>
    <tr><td>Producer workflow</td><td>Drafting, submission,
revision loop, private contact handling</td><td>Image
uploads pending safety controls</td></tr>
    <tr><td>Editorial controls</td><td>State-driven
workflow, approval and publication separation, audit
trail</td><td>None in workflow control path</td></tr>
    <tr><td>Social moderation</td><td>Moderation queue and
state controls</td><td>Provider sync until credentials and
approvals are complete</td></tr>
  </tbody>
</table>

```

<h2>3) Workflow Governance</h2>

<h3>Editorial state model</h3>

- Private states remain non-public until explicit publication.
- Approval records editorial acceptance only.
- Cancellation preserves public reference page with protective behavior.
- Archive acts as terminal, non-destructive historical state.

<h3>Data safety characteristics</h3>

- Visitor schedule persistence is browser-local and non-account based.
- Producer contact details remain private and excluded from public payloads.
- Transition and moderation actions maintain immutable

audit lineage.

<h2>4) Activation Matrix</h2>

<table>

<thead>

<tr><th>Integration</th><th>Current posture</th>
<th>Activation prerequisites</th></tr>

</thead>

<tbody>

<tr><td>Email provider</td><td>Fail-closed when
unconfigured</td><td>Provider keys, sender/domain
verification, controlled proof</td></tr>

<tr><td>Organizer subscription workflow</td>
<td>Consent/outbox framework in place, outbound
disabled</td><td>Legal approval, shared secret provisioning,
operator assignment, proof tests</td></tr>

<tr><td>Social sync providers</td><td>No sync without
provider credentials</td><td>Provider contracts, moderation
SLA readiness, monitoring and fallback verification</td>
</tr>

<tr><td>Producer asset uploads</td><td>Disabled by
design gate</td><td>Malware scanning service and audited
storage permissions</td></tr>

<tr><td>Production CSV import</td><td>Private draft-only
import model</td><td>Dry-run evidence, signed review,
backup/restore proof, post-import verification</td></tr>

</tbody>

</table>

<div class="callout critical">

Critical release rule: no integration may be switched on
by merge alone. Activation needs a dedicated approval event
and recorded evidence.

</div>

<h2>5) Operational Playbook</h2>

<h3>Before production launch</h3>

```
<ol>
  <li>Finalize legal copy for privacy and terms pages.</li>
  <li>Verify quality gates including browser coverage on
Chromium, Firefox, and WebKit.</li>
  <li>Confirm role ownership with organizational aliases and
escalation paths.</li>
  <li>Complete each provider-specific activation checklist
and controlled test.</li>
  <li>Record activation decision and rollback owner for each
integration.</li>
</ol>
```

<h3>Incident response baseline</h3>

```
<ul>
  <li>Treat moderation safety, personal data concerns, and
credential exposure as dual-track escalations.</li>
  <li>Preserve evidence and avoid destructive cleanup during
active incidents.</li>
  <li>Use retry workflows for transient outbound delivery
failures.</li>
</ul>
```

<h2>6) Handover Artifact Index</h2>

```
<table>
  <thead>
    <tr><th>Document</th><th>Use case</th></tr>
  </thead>
  <tbody>
    <tr><td>Client User Guide</td><td>Daily operation for
visitors, producers, editors, and admins</td></tr>
    <tr><td>Feature baseline and product decisions</td>
<td>Acceptance boundaries and workflow constraints</td></tr>
    <tr><td>Schedule and email operations</td><td>Outbound
behavior and activation planning</td></tr>
    <tr><td>Producer submission operations</td>
<td>Submission handling, upload controls, and safety
gates</td></tr>
    <tr><td>Social feed operations</td><td>Provider choices,
```

```
moderation standards, and activation checklist</td></tr>
  <tr><td>Import runbook and migration guide</td><td>Safe,
auditable CSV data onboarding</td></tr>
</tbody>
</table>
```

<h2>7) Acceptance Signoff Template</h2>

```
<div class="box">
```

```
  <p><strong>Client acceptance confirms:</strong></p>
```

```
  <ul>
```

```
    <li>Application behavior reviewed and accepted against
current scope.</li>
```

```
    <li>Known non-active integrations acknowledged.</li>
```

```
    <li>Activation ownership and escalation roles assigned.
</li>
```

```
    <li>Runbook locations and operational responsibilities
understood.</li>
```

```
  </ul>
```

```
  <p>Signoff date: _____</p>
```

```
  <p>Primary approver: _____</p>
```

```
  <p>Secondary approver: _____</p>
```

```
</div>
```

```
<p class="footer">This handover guide is a polished
operational summary. Detailed source runbooks in the docs
directory remain authoritative for execution steps and
control procedures.</p>
```
