

Save Philly Festivals Client User Guide

Audience: Client operations, producers, and editorial staff

Application timezone: America/New_York

[Public Discovery](#)[Producer Submission](#)[Editorial Workflow](#)[Schedule + Calendar Export](#)

This guide reflects the current implemented behavior. Some external integrations are intentionally disabled and require explicit activation before launch.

<h2>1) Fast Orientation</h2>

<div class="grid">

<article class="card">

<h3>Visitor paths</h3>

Browse and filter festivals on the home page.

Read festival details and official links.

Save festivals or events in local browser

schedule.

Email schedule and export to calendar file.

</article>

<article class="card">

<h3>Team paths</h3>

Producers submit private festival drafts.

Editors review states and approve or request

changes.

Admins manage user roles and account access.

Moderators approve or suppress social posts.

```
    </ul>
  </article>
</div>
```

<h2>2) Roles and Access</h2>

```
<table>
  <thead>
    <tr><th>Role</th><th>Primary area</th><th>Account
required</th></tr>
  </thead>
  <tbody>
    <tr><td>Visitor</td><td>Home, festival pages, schedule
builder</td><td>No</td></tr>
    <tr><td>Producer</td><td>Producer dashboard and
submission editor</td><td>Yes, verified producer role</td>
</tr>
    <tr><td>Admin</td><td>Editorial queue, festival review
details</td><td>Yes, admin role</td></tr>
    <tr><td>Super admin</td><td>All admin areas plus
privileged account management</td><td>Yes, super admin
role</td></tr>
  </tbody>
</table>
```

<h2>3) Visitor Workflow</h2>

<h3>Search and discovery</h3>

```
<ul>
  <li>Filters are URL-backed, so search state is
bookmarkable and shareable.</li>
  <li>Date matching uses overlap logic for multi-day
festivals.</li>
  <li>If no data matches, users receive a clear reset path.
</li>
</ul>
```

<h3>Festival details</h3>

```
<ul>
  <li>Only published festivals are public.</li>
```

- Missing optional content shows user-friendly fallback text.

- Canceled festivals show a public tombstone page with disabled action controls.

<h3>Schedule builder</h3>

- Schedule data is stored only in the active browser and device.

- Email and consent choices are not stored in browser local storage.

- Overlap alerts are warnings only and do not delete selections.

<h3>Email schedule and export calendar</h3>

- Email sends are transactional and idempotent.

- Only currently published items are included at send/export time.

- Calendar export creates a snapshot ICS file for Google, Apple, and Outlook.

- All-day calendar entries use standards-based exclusive end dates.

<div class="callout ok">

Visitor saved schedule data remains intact even when delivery fails or unavailable items are omitted.

</div>

<h2>4) Producer Workflow</h2>

- Producer signs in and starts a new draft.

- Producer completes required fields and saves draft privately.

- Producer reviews acknowledgments and submits for

editorial review.

If changes are requested, producer revises and resubmits.

<table>

<thead>

<tr><th>State</th><th>Meaning for producer</th></tr>

</thead>

<tbody>

<tr><td>Draft</td><td>Editable private work in progress</td></tr>

<tr><td>Pending review</td><td>Read-only while editorial team reviews</td></tr>

<tr><td>Changes requested</td><td>Editable again with producer-safe feedback</td></tr>

<tr><td>Rejected</td><td>Not accepted in current review cycle</td></tr>

</tbody>

</table>

<div class="callout alert">

Image upload capability is intentionally disabled until malware scanning and storage controls are fully activated.
</div>

<h2>5) Editorial and Admin Workflow</h2>

<h3>Core rule</h3>

<p>Approval is not publication. Editors must complete a second action to publish approved content.</p>

<table>

<thead>

<tr><th>State</th><th>Public visibility</th><th>Typical next action</th></tr>

</thead>

<tbody>

<tr><td>Pending review</td><td>No</td><td>Request

```

changes, reject, or approve</td></tr>
  <tr><td>Approved</td><td>No</td><td>Publish when
ready</td></tr>
  <tr><td>Published</td><td>Yes</td><td>Unpublish or
cancel if needed</td></tr>
  <tr><td>Canceled</td><td>Tombstone only</td>
<td>Archive</td></tr>
</tbody>
</table>

```

<h3>Moderation safeguards</h3>

```

<ul>
  <li>External posts are pending by default and require
explicit approval.</li>
  <li>Reject and hide actions require moderator reason
logging.</li>
  <li>Public page render remains first-party and script-
safe.</li>
</ul>

```

<h2>6) Operations and Activation Status</h2>

```

<table>
  <thead>
    <tr><th>Integration area</th><th>Current status</th>
<th>Before enabling</th></tr>
  </thead>
  <tbody>
    <tr><td>Production email delivery</td><td>Configured to
fail closed when provider keys are absent</td><td>Complete
provider setup, domain verification, and controlled
proof</td></tr>
    <tr><td>Organizer subscription workflows</td><td>Queue
and contracts are in place, outbound delivery disabled</td>
<td>Legal approval, credential setup, tests, and explicit
activation</td></tr>
    <tr><td>Social provider sync</td><td>Adapters exist,
sync disabled without provider secrets</td><td>Provider
contract proof, moderation readiness, and monitoring</td>

```

```

</tr>
  <tr><td>Producer asset uploads</td><td>Disabled by
policy gate</td><td>Malware scan service and audited storage
controls</td></tr>
</tbody>
</table>

```

<h2>7) Troubleshooting Quick Map</h2>

```

<table>
  <thead>
    <tr><th>Issue</th><th>Likely reason</th><th>Action</th>
</tr>
  </thead>
  <tbody>
    <tr><td>Festival approved but not visible publicly</td>
<td>Approval step completed but publish step not taken</td>
<td>Move state from approved to published</td></tr>
    <tr><td>Schedule email failed</td><td>Email provider not
activated or provider unavailable</td><td>Retry after
provider health check; schedule remains safe</td></tr>
    <tr><td>Producer submit blocked in production</td>
<td>Deployment gate prerequisite missing</td><td>Validate
edge rate limiting and site URL configuration</td></tr>
    <tr><td>Unexpected moderation visibility</td><td>Post
state recently changed</td><td>Hide immediately and document
reason</td></tr>
  </tbody>
</table>

```

<h2>8) Handover Checklist</h2>

```

<ol>
  <li>Confirm final role owners and replace personal inboxes
with organizational aliases.</li>
  <li>Review legal draft pages and replace with approved
privacy and terms copy.</li>
  <li>Run release verification for browser matrix including
WebKit coverage.</li>
  <li>Complete activation proof checklist for each external

```

provider.

Store this guide PDF with project runbooks and incident contacts.
